

Recycling EURAJOEN ROMU OY

...customised recycling solutions.

Our environmentally friendly recycling facility is versatile and has been transformed through the years according to developments in recycling requirements. Our operations are guided by the ISO 9001 quality management system and the ISO 14001 environmental management system.

Our latest investments are the recently constructed reception and processing hall as well as a high-powered baler-cutter..

Thanks to internationalisation, recycled metals end up on the domestic market as well as with international end users. Exports constitute 60-70% of our company's turnover. Our revenue in 2008 was approximately 30 million euros. The end users receive refined and quality-confirmed recycled materials for re-use. Finnish foundry and steelworks industries have elected Eurajoen Romu Oy as recycled steel supplier of the year from over 300 candidates.

We offer personalised recycling solutions for industries. The modes of operation are planned in co-operation with the client and performance reviews are used to monitor that set targets are met. Our company has over 400 business clients in Finland.

In addition to metals and irons, we recycle: rechargeable batteries, tires, EE-scrap, wooden containers and plastics.

We sell metal products, interchangeable containers and boxes, recycling raw materials for industries and woodchip.

We hope to work in cooperation with You.
